Professional Summary

Frontend Software Engineer with **2+ years** of experience at SenseHQ building hiring workflows for an enterprise recruitment CRM in **React.js**. Skilled in Chrome extensions, i18n infrastructure, AST-based codemods and reusable design-system components. Hands-on with **LLMs** and the **Vercel AI SDK**, building AI agents for career-site generation, candidate interviews and automated bug fixing.

Experience

SenseHQ Sept. 2025 – Present

Software Engineer (Frontend), SDE-1 *Bengaluru, India*

- Owned end-to-end **hiring lifecycle workflows** for candidates and jobs within an enterprise CRM
- Built and maintained a **Chrome extension** for the CRM that scrapes LinkedIn profiles, downloads candidate resumes, and lets recruiters add candidates to the talent pool or refer them to a job – adopted by **15+ customers**
- Developed a **config-driven chart wrapper** for the internal design system, enabling reusable and customizable data visualizations
- Led the seamless migration of **35+ customers** from the legacy CRM UI to the redesigned UI

SenseHQ Oct. 2024 – Mar. 2025

Software Engineer Intern (Frontend), SDE Intern *Bengaluru, India*

- Implemented **internationalization (i18n)** with support for static and dynamic language switching, adopted by **20+ customers**
- Built an **AST-based parser (codemod)** that scans the application bundle and automatically wraps UI labels for translation

Projects

Agentic Career Site Builder | *React.js, AI Agents, LLMs* *SenseHQ Hackathon*

- Built an **agentic career site builder** that lets recruiters generate and customize a company career site through natural-language prompts
- Generated sites include a **job listing** page so candidates can browse open roles and apply directly

AI Recruiter | *React.js, LLMs* *SenseHQ Hackathon*

- Built an **AI recruiter** that autonomously conducts candidate interviews and produces an **interview score** and **AI-generated summary**
- Added **cheating detection** that flags suspicious behaviour during the interview and surfaces it to recruiters alongside the results

Aegis (Shield) | *Sentry, GitHub Actions, LLMs* *SenseHQ Hackathon*

- Built an automated error-remediation pipeline: when an error reaches **Sentry**, a **GitHub Action** runs and automatically opens a **fix PR**
- Automatically **notifies the module owner** to review the PR, cutting the time from error to fix

Education

Chandigarh University 2020 – 2024

B.Tech, Computer Science and Engineering *Mohali, Punjab, India*

- GPA: 7.25

Certifications

React – Coursera **Creativity and Critical Thinking** – LinkedIn Learning

Skills

Languages: JavaScript, HTML, CSS
Frameworks & Libraries: React.js, Next.js, Redux, Redux Toolkit
AI & Automation: Vercel AI SDK, LLM integration, AI agents, tool calling, prompt engineering, GitHub Actions, Sentry
Tooling & Integration: Chrome extension development, AST-based codemods, REST APIs, Axios, Postman, React Query, i18n infrastructure
Design Systems: MUI, config-driven/reusable component libraries (Genesis Design System)
Other: Git
